INTERPRETATION

The Alleged Father is excluded as the biological father of the Tested Child

Probability of Paternity: 0.000000% Combined Paternity Index: 0.00

Based on this DNA analysis the alleged father can be excluded as the biological father of the tested child. The probability of paternity in this evaluation was 0%. This probability is calculated by comparing the alleged father to an untested and unrelated random individual of the Caucasian population (assuming a prior probability of 0.5).

METHODOLOGY:

The DNA paternity testing was performed using the GlobalFiler® PCR Amplification Kit and a ABI 3500 Genetic Analyzer using manufacturer protocols.

NOTE:

Due to the lack of strict sample chain of custody by a neutral party this laboratory cannot guarantee the origin of these samples. Given this, these test results may not be defensible in a court of law for the establishment of paternity or other legal matters.
